Materials Science and Engineering is an interdisciplinary field. Materials science studies the fundamental physical and chemical basis for the controlled combination of atoms to form new compounds, phases, and microstructures, as well as the characterization of the resulting structures and properties. Materials Engineering focuses on the synthesis of materials in useful quantities, and on the processing of component materials into engineering products. Materials engineering draws heavily on the fundamental knowledge gained from materials science, and adapts the processes involved for the scale and requirements of the application. There is a rich interplay between the science and engineering aspects. Basic studies frequently find ways to improve the properties of materials, and goal-oriented engineering often reveals aspects of performance that challenge the basic understanding.

A major goal of the Department is to educate students with abilities for scientific and engineering leadership. They will develop knowledge for conducting the next generation technologies, which are also essential for solving societal and environmental issues. The research academic programs unify all classes of materials and processing, including introductory courses and advanced courses in metals, ceramics, polymers, composites and electronic materials and characterization. The MSE educational and research program is interdisciplinary, focusing on all materials - ceramics, electronic materials, metals, minerals and polymers, among others - and their composites. Analytical facilities at the nanotechnology research center support department researchers as well as other universities and industries. The world today is in the midst of a materials revolution, the outcome of which will affect the economic well-being of all nations and all industries. Materials Science and Engineering is an interdisciplinary field. Materials science studies the fundamental physical and chemical basis for the controlled combination of atoms to form new compounds, phases, and microstructures, as well as the characterization of the resulting structures and properties. Materials Engineering focuses on the synthesis of materials in useful quantities, and on the processing of component materials into engineering products. Materials engineering draws heavily on the fundamental knowledge gained from materials science, and adapts the processes involved for the scale and requirements of the application. There is a rich interplay between the science and engineering aspects. Basic studies frequently find ways to improve the properties of materials, and goal-oriented engineering often reveals aspects of performance that challenge the basic understanding.

A major goal of the Department is to educate students with abilities for scientific and engineering leadership. They will develop knowledge for conducting the next generation technologies, which are also essential for solving societal and environmental issues. The research academic programs unify all classes of materials and processing, including introductory courses and advanced courses in metals, ceramics, polymers, composites and electronic materials and characterization. The MSE educational and research program is interdisciplinary, focusing on all materials - ceramics, electronic materials, metals, minerals and polymers, among others - and their composites. Analytical facilities at the nanotechnology research center support department researchers as well as other universities and industries. The world

today is in the midst of a materials revolution, the outcome of which will affect the economic well-being of all nations and all industries. 管理學院 College of Management

管理學院會計與資訊管理國際學士班 Bachelor Program of Accounting and Information Management

<https://accim.ndhu.edu.tw>

「會計與資訊管理國際學士班」採全英語授課，並陸續與多家外國學校簽訂雙聯學校，希望培養學生具備台灣及美國會計師證照所需相關專業能力，並因應業界各種「電腦稽核」、「法遵人才」、「人工智慧應用於法遵與稽核」、「智慧會計」、「資訊安全」及「內控和風險管理」等議題及需求不斷出現，業界這些實務問題及人力需求，不再只是原有純會計領域訓練的人才所能獨力面對，而若能藉由會計與資訊管理的雙專業結合，則是面對會計最新發展趨勢的有效解決之道，因此管理學院希望能藉由整合會計學系與資訊管理學系兩系師資專長，共同於學院下推動新的「會計與資訊管理國際學士班」。

管理學院設置「會計與資訊管理國際學士班」主要發展方向為提供全英教學課程，吸引國際學生與本地學生就讀，並與本校國際事務處合作推動國際學生就讀，以穩定中求進步的方式來進行本新增學系的發展與經營。

另一個重點為協助本地學生取得台灣會計師考試的應考資格，及充足的國際會計師考試資源，讓學生進可攻退可守，並且國際四大會計師事務所均一再表示對於會計結合資訊管理的人才需求，尤其是法遵、電腦審計、智慧會計、風險控管、資訊安全等領域，因此培養符合業界期待的會計資訊人才為本學系的發展重點。

The "Bachelor Program of Accounting and Information Management" is conducted entirely in English and has established dual-degree partnerships with various foreign universities. The goal is to equip students with the necessary expertise to obtain accounting certifications in Taiwan and the United States. In response to emerging industry needs and topics such as "Computer Auditing," "Compliance Professionals," "AI applied in Compliance and Auditing," "Digital Accounting," "Information Security," "Internal Control and Risk Management," the challenges and demands faced by the industry are no longer manageable by talents trained solely in the traditional accounting field.

Combining the dual expertise of accounting and information management can effectively address these challenges, providing a solution to staying up-to-date with the latest developments in the field. Hence, the School of Management integrates the expertise of the Department of Accounting and the Department of Information Management, jointly launching the new "Bachelor Program of Accounting and Information Management" under the college.
